1516, 3rd floor, Wazir Nagar
Kotla Mubarakpur
New Delhi - 110003

महोदय,

मेरा नाम नीतु देवी है, हम बिहार के दूधरा जिले में रहते हैं, मेरी बेटी का नाम रिशा कुमारी है और उसका इलाज दिल्ली के AIIMS अस्पताल में चल रहा है, मेरी बच्ची को ल्यूकेमिया की बيمारी है। जिसकी वजह से उसकी हालत बहुत खराब है। रिशा के पिता का कुछ समय पहले ACCIDENT हो गया था जिसकी वजह से वह कुछ काम करने में असमर्थ है। डॉक्टर ने बताया है कि रिशा को जल्द से जल्द एक बोन मरोस्टोप्लास्टी की जरूरत है जिसमें 3 लक्षणों को ध्यान में रखा जाएगा। मेरे अपने बच्चे का इलाज कराते में असमर्थ है। आप लोगों से हमारी बिनती है हमारे बच्चे के इलाज करने में हमारी सहायता करें।

Consultant Incharge : Dr. Sameer Bakhshi Request Date/Time : 17-03-2025 /11:20:57
Receiving Date/Time : 17-03-2025 /15:13:25

HISTOPATHOLOGY REPORT**GROSS EXAMINATION:**

Accession No. : S2513917A

Received two pieces of linear cores of bony tissue measuring 2.5 cm.

MICROSCOPIC EXAMINATION:

Bone marrow biopsy is adequate and shows a cellularity of 50-60%.

Hematopoietic cells of all three series are seen.

There is no increase in interstitial immature cells/atypical cells/granulomas in the sections examined.

Giggles Foundation metastasis in the sections. Giggles Foundation

Giggles Foundation

Note : Patient is a case of HR-Neuroblastoma vide clinical history.

DIAGNOSIS:

S2513917A

Bone Marrow

Bone marrow biopsy

• Descriptive, see above

1. This report is electronically generated and does not require a signature or stamp to be considered valid.
2. The pathology diagnosis is to be interpreted by the treating physician in conjunction with clinical features, imaging, and other investigations.

Accession No.	162414640	Registration Date	: 29/03/2025 09:31:50
Patient ID	P16100013921	Sex / Age	: Female 8 Yrs
Patient Name :	Baby RISHA KUMARI	Report Released on	: 29/03/2025 11:21:22
Client Name :	CANKIDS	Aadhar/ Passport No	:
Ref. By	: Mr. CANKIDS		

The heart and the mediastinal vascular structures are well opacified with I/V contrast. The trachea and main bronchi appear normal.

Mildly increased FDG uptake noted in soft tissue density in anterior mediastinum – likely physiological thymic uptake.

Both lung fields are showing normal attenuation. No focal abnormal FDG uptake is noted in the lung parenchyma.

No obvious pleural thickening/ effusion.

No significant FDG avid mediastinal lymph nodes.

Non FDG avid subcentimeteric bilateral axillary lymphnodes with preserved fatty hilum noted – likely non-specific.

Abdomen and Pelvis: -

Giggles Foundation

Giggles Foundation

Giggles Foundation

Liver parenchyma is normal in attenuation values and enhancement pattern. *Focal FDG avid subtle hypodense area noted in segment VII of liver (SUV max 3.4).* Intrahepatic biliary radicals are not dilated. Portal and hepatic veins are normal.

Gallbladder, pancreas, spleen, adrenals and bilateral kidneys appear unremarkable. *(USG is the modality of choice to evaluate for cholelithiasis/choledocholithiasis).*

Mildly FDG avid and non-avid left paraaortic, preaortic, aortocaval and mesenteric (1.8 x 1.5cm, SUV max 2.6) lymph nodes are noted.

There is no ascites.

The stomach, small and large bowel loops appear normal in calibre and fold patterns and shows physiological FDG uptake.

No abnormally increased FDG uptake noted in relation to the uterus.

Musculoskeletal: -

No abnormal FDG uptake noted in axial and visualized appendicular skeleton.

¹⁸F-FDG WHOLE BODY PET-CT STUDY

Patient Name: RISHA KUMARI		Age/Sex: 8Y/F
Study ID: FDG/36263/25	UHID: 106792980	Date: 23.09.2025
Indication: K/c/o HR-metastatic NB (2022), post CT, planned for ASCT, PET/CT for current disease status.		

Procedure: PET-CT acquisition was done 60 minutes after injection of 10mCi ¹⁸F-FDG by intravenous route, from the level of vertex to mid-thigh.

PET-CT Findings:

Head and Neck: Mucosal thickening noted in bilateral maxillary sinuses. Increased tracer uptake noted in nasopharyngeal and bilateral palatine tonsils with few sub-centimetric bilateral cervical levels IB and II lymph nodes – likely reactive. Increased FDG uptake noted in lower molar and premolar dental sockets- likely infective/inflammatory. Visualized paranasal sinuses, skull base, pharynx, larynx, thyroid and rest of the neck region do not show any abnormality on CT.

Thorax: FDG avid sub-centimetric left axillary level I lymph node noted with preserved fatty hilum- likely post injection. Few subcentimetric right upper & lower paratracheal, and bilateral hilar lymph nodes noted, with no significant tracer uptake – likely reactive. Diffuse increased FDG uptake noted in thymus. Lungs, large airways, pleura heart, great vessels and other mediastinal structures appear normal on CT.

Abdomen-Pelvis: FDG avid left inguinal lymph node noted preserved fatty hilum (measuring ~1.2x0.6cm). Normal radiotracer distribution is noted in the spleen, liver, small bowel, kidneys and urinary bladder.

Musculo-Skeletal System: FDG avid cutaneous thickening noted in lateral aspect of distal left leg (max thickness ~3mm)- new finding. Diffuse increased FDG uptake noted in the visualized axial and appendicular skeleton with no focal lesion – likely reactive.

IMPRESSION:

- Metabolically active cutaneous thickening in lateral aspect of distal left leg with left inguinal lymph node- likely infective/inflammatory.
- No definite scan evidence of metabolically active lesion elsewhere to suggest residual/recurrent disease.
- As compared to previous PET/CT study (pvt dated 29.03.2025), there is interval appearance of left leg cutaneous thickening.

बाहर से आने वाले रोगियों के लिए धर्मशाला की सुविधा उपलब्ध है/Dharamshala facility is available for outstation patients

RADIOLOGY UNIT

Dr. B. R. Ambedkar Institute Rotary Cancer Hospital
All India Institute of Medical Science, New Delhi -110029

Patient Name	RISHA KUMARI	Gender/Age	F/8 y
UHID	106792980	Exam Date	27/01/2025 10:32AM
OPD / Ward:	Medical Oncology	Modality	CT
Procedure Name	IRCH CT Neck, Chest, Abdomen, Pelvis		

Procedure: CECT of Head, neck and Chest and abdomen

Clinical background: K/C/O Neuroblastoma with diffuse metastasis

Head:

Posterior fossa: Normal.
Cerebral parenchyma: Normal.
Ventricles: Normal.
Subarachnoid spaces: Normal.
Basal ganglia and thalami: Normal.
Additional information: None.

Neck:

Multiple asymmetric lymph nodes seen in left level 2, 3, 4, 5 and left supraclavicular locations, largest measuring 9mm in SAD in left level 4A, with left showing calcification with fat.

Sinonasal cavities: Normal
Pharynx/larynx: Normal
No lymph node enlargement

Chest

Mediastinum: No lymph node enlargement. Soft tissue density is seen in the prevascular space- s/o thymus.

Trachea/ main bronchi: normal.

Both lungs: Normal; no focal lesion.

Serosal spaces: Normal. No pleural or pericardial effusion.

Abdomen & Pelvis

Liver: Normal. No focal lesion.

CBD/ Gall bladder: Normal.

Pancreas: Normal.

Spleen: Normal.

Both kidneys/ ureters: Normal, No hydronephrosis.

Retroperitoneum/ vessels: Normal. No lymph node enlargement.

Free fluid: No ascites.

Urinary bladder: Normal.

Uterus and adnexae: Normal.

Additional information: None.

Comparison: On comparison with previous study dated -07/05/23, there is significant reduction in size of cervical nodal mass.

Accession No.	162414640	Registration Date	: 29/03/2025 09:31:50
Patient ID	P16100013921	Sex / Age	: Female 8 Yrs

Client Name :	CANKIDS	Aadhar/ Passport No	:
Ref. By	: Mr. CANKIDS		

DIGITAL WHOLE BODY PET CT

Clinical History: Known case of neuroblastoma with diffuse metastasis. Post chemotherapy (till Feb 2024). On oral chemotherapy. PET/CT study for further evaluation.

Procedure: 6.0 mCi of ¹⁸F-fluorodeoxyglucose was administered intravenously. To allow for distribution and uptake of radiotracer, the patient was allowed to rest quietly for 60 minutes in a shielded room. Imaging was performed on an integrated PET/CT scanner. CT images for attenuation correction and anatomic localization followed by PET images from vertex to toe were obtained. SUVmax was normalized to body weight SUVmax bw. Serum Creatinine and blood glucose was 0.30mg/dL and 99mg/dL respectively. CT scanning was performed using non-ionic intravenous and oral contrast. No adverse reaction was observed during the scan.

Observations:

Brain: -

Normal physiological tracer distribution noted in the brain parenchyma. No focal lesion or abnormal uptake noted in the brain.

(NOTE: If there is a strong suspicion for brain metastases, then MRI is suggested for further evaluation as small lesions may not be detected on an FDG PET/CT study due to normal high physiological uptake in the brain).

Head and Neck: -

Nasopharynx, oropharynx, hypopharynx and larynx appear normal with no abnormal FDG uptake is seen in relation to them.

Diffuse symmetrical FDG uptake noted in bilateral tonsils – likely inflammatory.

Thyroid gland is normal in size and attenuation pattern with no focal abnormal FDG uptake.

Bilateral major salivary glands appear normal with no abnormal FDG uptake.

FDG avid bilateral cervical level IB (left: 0.9cm x 1.5cm, SUV max 5.2) & II lymph nodes are noted (right level II: 1.1 x 1.0cm, SUV max 6.2).

No significant FDG avid supraclavicular lymphadenopathy.

Thorax: -

HISTOPATHOLOGY REPORT

GROSS EXAMINATION:

Accession No. : S2513917A

Received two pieces of linear cores of bony tissue measuring 2.5 cm.

MICROSCOPIC EXAMINATION:

Bone marrow biopsy is adequate and shows a cellularity of 50-60%.

Hematopoietic cells of all three series are seen.

There is no evidence of interstitial immature cells/atypical cells/granulomas in the sections examined.

There is no evidence of metastasis in the sections examined.

Note : Patient is a case of HR-Neuroblastoma vide clinical history.

DIAGNOSIS:

S2513917A	Bone Marrow	Bone marrow biopsy	• Descriptive, see above

BMA BMT PS

Report: Cellular bone marrow preparation shows haematopoietic cells of all series (M:E=3.2:1).
 There is no evidence of metastasis in the smears examined.

Peripheral smear is unremarkable.

Advice : Correlation with bone marrow biopsy

Conclusion

This is an electronically generated report, authorized signature is not required. The test reports have been authenticated. Partial reproduction of the report is not permitted.

Date of Examination : 01-NOV-2023 09:50 AM	

Procedure: **CECT of Head, neck and Chest**

Clinical background: K/C/O neuroblastoma with cervical mass and intracranial mets

HEAD

Posterior fossa: Normal.

Cerebral parenchyma: Normal.

Ventricles: Normal.

Subarachnoid spaces: Normal.

Basal ganglia and thalami: Normal.

NECK-FACE

Multiple discrete and conglomerated necrotic lymph nodes seen in left level 2 , 3, 4, 5 an left supraclavicular locations (largest measuring 1.2 cm in SAD), with few showing calcification within.

Paranasal sinuses/ nasal cavity: Normal.

Oral cavity: Normal.

Maxilla/ mandible: Normal.

Nasopharynx/ oropharynx: Normal.

Infra-temporal neck spaces: Normal.

Hypopharynx/ larynx: Normal.

Major neck vessels: Normal.

Additional information: None.

CHEST

Mediastinum: Normal, No lymph node enlargement.

Trachea/ main bronchi: normal.

Both lungs: Normal; no focal lesion.

Serosal spaces: Normal. No pleural or pericardial effusion.

Additional information: mild hepatomegaly.

Comparison: On comparison with previous study dated -31/7/23 significant reduction in size of cervical nodal mass , left axillary nodes and resolution of dural metastasis- Partial response

Impression: In a case of neuroblastoma present scan shows left sided nodal mass in neck – partial response
